

1/4 c fresh lavender tincture

1 teas. Benzoin

2 drops yellow food coloring

Pour both mixtures at once into a commercial mixer and beat for thirty minutes.

Apply daily to dry, itchy skin. Keep refrigerated.

My father used this lotion and noted that his skin was not dry or itchy for 24 hours.

This lotion was then used by two other people, who reported that their skin was not dry for 24 hours. Lavender and aloe soothe the skin and have anti-microbial properties.

Based on these successes, I decided to patent and promote the use of ratite oil as a topical adjuvant and transdermal delivery system.

CLAIMS

What is claimed is:

1. The use of ratite (ostrich, emu, rhea, cassowary) oil as a topical adjuvant for agents on mammalian skin, in any formulation including but not limited to gel, cream, lotion, emulsion, oil, ointment, suspension, aerosol, spray, powder, aerosol powder, or semi solid formulation, etc., in a container or dispenser, including not limited to pump dispenser, jar, spray bottle, pouch, tube, roll-on, squeeze bottles, flexible articles intended to be worn on the skin, impregnating said composition into a fibrous or non-fibrous matrix, dermal patch, adhesive tape, etc. This claim specifically excludes progesterone (U.S. Pat. No. 6,303,132).
2. The composition of claim 1, wherein any fraction, derivation, alteration, or modification of ratite oil is used in the preparation in any concentration.

3. The composition of claim 1, wherein the agent includes, but is not limited to, alternative medicines, such as St. John's Wort or comfrey root, and traditional medicines, such as ibuprofen, whether in purified, partially purified, or unpurified form, in any concentration, specifically excluding Lidocaine (U.S. Pat. No. 5,849,334) and anesthetics (U.S. Pat. No. 5,698,227).
4. The use of ratite oil as a transdermal delivery system for agents on mammalian skin, in any formulation including but not limited to gel, cream, lotion, emulsion, oil, ointment, suspension, aerosol, spray, powder, aerosol powder, or semi solid formulation, etc., in any container or dispenser, including but not limited to pump dispenser, jar, spray bottle, pouch, tube, roll-on, squeeze bottles, flexible articles intended to be worn on the skin, impregnating said composition into a fibrous or non-fibrous matrix, dermal patch, adhesive tape, etc. This claim specifically excludes Lidocaine (U.S. Pat. No. 5,849,334) and anesthetics (U.S. Pat. No. 5,698,227).
5. The composition of claim 4, wherein any fraction, derivation, alteration, or modification of ratite oil is used in the preparation in any concentration.
6. The composition of claim 4, wherein the agent includes, but is not limited to, alternative medicines, such as St. John's Wort or comfrey root, and traditional medicines, such as ibuprofen, whether in purified, partially purified, or unpurified form, in any concentration, specifically excluding progesterone (U.S. Pat. No. 6,303,132)..
7. A method of topically administering agents and ratite oil, comprising application of a composition of ratite oil and an agent, to the skin surface of mammals, in any type of formulation.
